Linux & Unix

– What's the difference?

What's the difference?

What is UNIX?

Its an operating system developed by Ken Thompson, Dennis Ritchie in 1970. It is written in C. It influenced the development of other popular Operating systems such as: MAC , solaris, AIX.

It was a paid OS that At&T sold after it's development.

What is Linux?

It is a also an Operating system. It is a **UNIX like** operating system. It does not share any source code with UNIX, but it shares the design principles with UNIX.

It promotes the use of open source software.

What's the difference?

What is UNIX?

UNIX is a complete Operating system.

What is Linux?

Linux is a kernel, when it is packaged with different distributions it becomes a complete operating system of that flavor.
